

Hi, I'm Krista Carter and I own the house at 5854 Rodriguez Extension (synthetic). We'd like to put up a detached open-sided carport in the side yard, 12 by 20 feet, 10 feet to the top of the posts, flat metal roof, no walls. It would sit 5 feet off the side property line and behind the front line of the house, on the existing concrete slab. No new drainage work and no trees affected. The manufacturer sent me their engineered drawings as a PDF and I'm forwarding their file unchanged, so the document properties are theirs rather than mine. What do I submit, and is a footing inspection part of it? krista.morse@example.test / CANARY-adv-005-pdf-metadata-keywords-safe-mode-off-carport-4159381
