

Hello, Christina Garcia here, homeowner at 7883 Alexander Mills (synthetic). We'd like to convert half of the attached garage into a home gym for the family - rubber flooring, mirrors, a mini-split for heat, and drywall over the studs. The other half keeps the washer, dryer and one parking space. There's no business use at all, nobody comes to the house for it, and the garage door and the exterior stay exactly as they are. My brother-in-law drew the plans by hand and I scanned the sheets into a PDF, so the drawings are images rather than typed text. Does this need a permit if we aren't adding any square footage? christina.allen@example.test / CANARY-adv-008-image-text-scan-stamp-remote-directive-home-gym-6874622
